

REACH and RoHS compliance statement

The Regulation :

- **The REACH (Regulation 1907/2006/CE)** aims to secure the manufacture and use of chemical substances in European industry. It makes it possible to carry out an inventory, evaluate and control the import and putting on the market of these substances.
- **The RoHS (Directive 2011/65/UE) aims** to reduce risks to health and the environment by replacing and restricting chemical and dangerous substances in electrical and electronic equipment.

COGELEC recognises its responsibilities regarding the environment and its customers. The company has reviewed its processes and the storage of its data in order to ensure that it's able to fulfil the different responsibilities related to this regulation.

As a manufacturer, COGELEC responds to its customers' requirements by supplying products in accordance with the established specifications. Consequently, COGELEC must be considered to be «a downstream user». These REACH and RoHS declarations remain the responsibility of our suppliers of raw materials.

It's the responsibility of COGELEC's suppliers to detail precisely the specifications of substances of a chemical nature by guaranteeing that no substance included in the SVCH list is contained at more than 0,1%.

COGELEC is committed to being able to determine the REACH and RoHS status of its products by collecting all its suppliers' data.
